EDUCATION

University of California, Berkeley | **Computer Science B.A.** | **Class of 2027**

Relevant Coursework: Discrete Math, Linear Algebra, Data Structures & Algorithms, Computer Architecture, AI, Graphics

Honors: Girls Make Games Scholar | AI4ALL Fellow | America On Tech Fellow | HSF Fund Scholar | EOP SSS STEM Scholar

Certifications: AI4ALL Ignite Accelerator (Responsible AI, ML & Python) | America On Tech DataCamp Data Science Fellowship

RESEARCH EXPERIENCE

Game AI Researcher / Developer | UC Berkeley GamesCrafters Research Group Fall 2025 - Present

- Strongly solved Orbito by engineering perfect-play agents in C and Python, exhaustively evaluating and classifying all 20,331,558 legal board positions; shipped as a playable AI opponent on the GamesCrafters public platform
- Indexed the full position space in 25 bits and stored solutions at 2 bits per position, compressing the complete solved database to 5.1 MB
- Analyzed full state distributions to compute win/loss/draw counts across the complete state space, applying combinatorial enumeration to evaluate game complexity and solution depth

FELLOWSHIP EXPERIENCE

Teen Online Camp Counselor | Girls Make Games Summer Fellowship Summer 2026

- Authored custom C# gameplay and visual novel systems in Unity, plus technical walkthroughs equipping remote learners to independently build gameplay mechanics
- Led a 3-week remote program as producer and lead instructor, shipping 6 individual student platformers and one collaborative narrative team capstone

Machine Learning Fellow | AI4ALL Fellowship 2024 - 2025

- Trained VAE and GAN generative models in PyTorch to procedurally generate playable 2D game levels under agent-based playability constraints
- Built an automated validation pipeline verifying structural playability before deployment, reducing unplayable outputs from 30% to 5%
- Conducted hyperparameter tuning and model evaluation experiments to improve generation quality and output reliability

Data Science Fellow | America On Tech (AOT) 2024 - 2025

- Built a credit card approval classifier (scikit-learn, GridSearchCV) achieving 79.4% test accuracy, exceeding the 75% project benchmark; engineered a full preprocessing pipeline including NaN imputation and StandardScaler normalization
- Earned DataCamp Data Science certification; attended industry sessions with data scientists from NBCUniversal and FactSet

WORK EXPERIENCE

Computer Science Instructor | ID Tech & Cal STEM May 2025 - Present

- Designed and delivered CS, ML, Roblox/Lua, and RAG curricula to continuously rotating cohorts of 50+ students; recorded online courses on Python for ML and retrieval-augmented generation (RAG) for broader distribution

Marketing Consultant Intern | Kaiser Permanente Summer 2024

- Queried multi-platform engagement datasets in SQL and translated stakeholder needs into web specifications for a gender-affirming care initiative, bridging development and marketing teams

TECHNICAL SKILLS

Languages: C#, Python, C/C++, Java, JavaScript, Swift, SQL

ML & Game AI: PyTorch, NumPy, Pandas, Reinforcement Learning, Procedural Content Generation, State-Space Modeling, Adversarial Search

Systems & Tools: Unity, React, Firebase, OAuth2, Git, Unix, HTML5/CSS

Data: Matplotlib, Seaborn, Statistical Modeling, DataCamp Certified
